

ISO CERTIFICATIONS & CMMI IMPLEMENTATIONS

GET STARTED RIGHT AWAY

Quality is paramount to delivering industry-leading products and services. i3 Design and Consulting LLC has over 17 years' experience supporting public and commercial organizations to achieve their certification and maturity rating goals. More importantly, we help organizations put in value added processes and business discipline that measurably improves their top and bottom lines.

i3 IMPLEMENTATION BENEFITS

Specialize in implementations for U.S. Government contractors.

Support for ISO 9000, 20000, and 27000

Support CMMI for Development and Services Models

Approach focuses on value added process development and integration

Remote Support to Full On-site Implementation Options

U.S. GOVERNMENT CONTRACTOR SPECIALIZATION

ISO and CMMI are designed to support any business or organization. While this facilitates the broad use of the frameworks, it often results in sub-optimal implementation results. i3 specializes in working with contractors that deliver IT, cyber, engineering, and (staff) services to the U.S. Government.

Operating successfully in the government contracting arena requires specialized knowledge of government requirements, laws, and expectations. Also, it requires a deep content understanding for the types of products and services delivered by the contractor and the methods by which those products and services are developed, acquired, and delivered.

SOLUTIONS FOR (STAFFING) SERVICES CONTRACTORS

Nearly every U.S. Government IDIQ or GWAC vehicle requires or provides procurement advantages for firms with ISO certifications and CMMI ratings. Most prime contractors pass those requirements to their subcontractors through contract flow-down clauses. However, implementation of the ISO standards and achievement of an appropriate CMMI rating is challenging for companies

providing staffing resources to the federal government because the standards are not written in a way that easily accommodates these types of businesses.

i3 has custom solutions built specifically to achieve the required certifications and ratings for resource staffing services firms. Moreover, our solutions have proven to improve business performance by lowering operational costs, raising customer acceptance rates for candidates, and significantly improving customer satisfaction. We do not just provide you a path to certification; we improve your business.

ENGINEERING AND DEVELOPMENT SOLUTIONS

Over the past five years increasing numbers of software engineering and development projects have moved from the traditional waterfall and spiral development methods to agile and scrum. Integrating an agile development with government CMMI requirements is not a straightforward endeavor. i3 is experienced in developing agile SDLC's that map to the CMMI for Development Level 3 requirements. If you have an existing agile SDLC, we can customize and integrate your existing solution to meet the model requirements.

Our solutions embrace the spirit of agile and significantly streamline and consolidate the documentation and artifact requirements of the CMMI model. This approach means that the CMMI requirements are simply built into your agile implementation and do not create additional work outside of your development processes.

CONSULTING SUPPORT OPTIONS

i3 offers a variety of consulting support options for to fit your budget and implementation complexity. We offer the following options:

- ◆ **Pay-As-You-Go Consultant**– Includes customizable process assets, access to the i3 training library, and limited remote consulting support. The best option for companies that want a complete solution and only need limited expert consulting.
- ◆ **Remote Consultant**– Best option for companies that want active project management, document development, and tailoring, and meeting coordination, but want the lower cost of a remote consultant.
- ◆ **On-Site Consultant**– Onsite consultant providing onsite assessments and SME process development support. The best option for companies that want active on-site project management, document development, and implementation support.

Our consultants will work with your team to create solutions work with industry leading agile development tools, such as Jira, Version One, and Microsoft TFS & VSO.

IT AND CYBER SOLUTIONS

i3 has extensive experience implementing ISO 20000 (IT Service Management) and 27000 (Information Security Management) solutions. We utilize our ITSM, ISO 20000, and ISO 27000 accelerators to jump-start your implementation. Using this approach, we are typically able to reduce the costs and implementation time frames for ISO 20000 and ISO 27000 by nearly 75%.

Our solutions are platform independent. However, as a certified ServiceNow Services Implementation partner, we have pre-built forms and extensions for the platform that can further reduce cost and improve the overall effectiveness of your implementation.

Our consultants leverage the NIST Risk Management Framework for our government ISO 27000 implementations. This approach ensures consistency with current and future government cyber security requirements. Moreover, we leverage the controls compatibility between ISO 27000 and NIST 800-53 to ensure you are positioned for future work in this critical area.
